

ASSIGNMENT15.2

1. Write a partial function to add three numbers in which one number is constant and two numbers can be passed as inputs and define another method which can take the partial function as input and squares the result.

```
//class partial function
class PartiallyAppliedFunctions() {
  //normal sum and square function
  private def sum(x : Int, y : Int) = {
    x + y + 10
  }

  private def square(x :Int) = {
    x * x
  }
  def getsum() : (Int, Int) => Int = { //input function with two inputs
    sum( _ : Int, _ : Int) //call sum function
  }
  //input the result of partial function
  def getsquare() : (Int) => Int = {
    square( _ : Int) //call square function
  }
}

object PartiallyAppliedFunction { //object of class
def main(args:Array[String]){
  val obj = new PartiallyAppliedFunctions()
  val r = obj.getsum()(4, 4)
  println("sum is")
  println( obj.getsum()(4, 4))
  println("square is")
  println(obj.getsquare()(r))
}
}
```

output

```
sum is
18
square is
324
```

```
<terminated> MulInher$ [Scala Application] /usr/lib/jvm/java-1.7.0-openjdk-1.7.0.79.x86_64/jre/bin/java (Nov 15
sum is
18
square is
324
```

2]

Write a program to print the prices of 4 courses of Acadgild:

Android-12999,

Big Data Development-17999,

Big Data Administration-17999,

Spark-19999

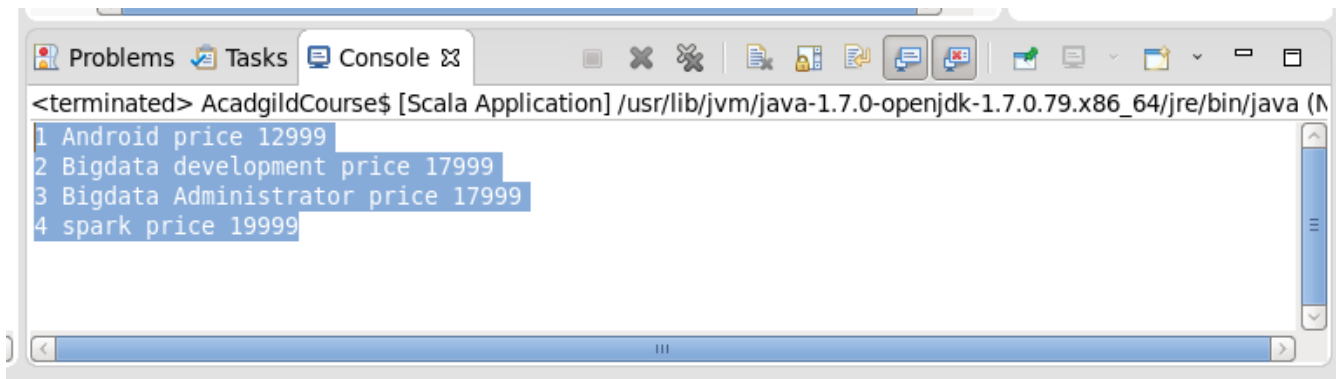

using match and add a default condition if the user enters any other course

```
object AcadgildCourse extends App {
  //map initialization
  val course=Map(1->"Android",
  2->"Bigdata development",
  3->"Bigdata Administrator",
  4->"spark")
  for(i<-course.keys){//for loop for key values
  {
    print(i+" ")
    //match statement for keys
    i match
    {
      //case statements for values 1,2,3,4 and default cases
      case 1 =>println(course(i)+" price 12999")
      case 2 =>println(course(i)+" price 17999")
      case 3=>println(course(i)+" price 17999")
      case 4=>println(course(i)+" price 19999")
      case _=>println("unknown course")
    }
  }
}
```

output

```
1 Android price 12999
2 Bigdata development price 17999
3 Bigdata Administrator price 17999
4 spark price 19999
```

Screenshots

The screenshot shows an IDE console window with the following content:

```
<terminated> AcadgildCourse$ [Scala Application] /usr/lib/jvm/java-1.7.0-openjdk-1.7.0.79.x86_64/jre/bin/java (N
1 Android price 12999
2 Bigdata development price 17999
3 Bigdata Administrator price 17999
4 spark price 19999
```

The console window has a toolbar with icons for Problems, Tasks, Console, and other IDE functions. The text in the console is highlighted in blue.
